Key words: errata, addenda – catalogues – surveys – galaxies: active – quasars: general – X-rays: galaxies.

In LaMassa et al. (2013), we reported a $z = 5.86$ quasar detected in the Stripe 82X survey as an X-ray-selected AGN discovered by this survey. This source, SDSS J000552.33-000655.6, was actually targeted by *Chandra* as part of a programme to follow up high-redshift AGN optically selected by the Sloan Digital Sky Survey, as discussed in Shemmer et al. (2006). The work of Shemmer

et al. (2006) represents the first X-ray detection of this high-redshift quasar.
