<sup>5</sup>Astrophysical Observatory of Turin, Italy

<sup>6</sup>Astronomical Observatory of Cagliari, Italy

The aim of this talk is to present "Sorvegliati Spaziali - know the Space to protect the Planet", a public dissemination project of the Italian National Institute for Astrophysics (INAF) dedicated to the Planetary Defense: from near Earth asteroids and comets to space weather, from meteors and meteorites to space debris, as well as prevention/mitigation strategies of their possible effects on the Earth environment.

Sorvegliati Spaziali represents one of the first coordinated public outreach initiatives on such topics by a research body and its main objective is to provide scientific and cultural knowledge to convey how our Planet is exposed to various natural and man-made threats in Space, as well as our current plans for response to them, meanwhile rowing against the many fake news about Planetary Defense that has biased the collective imagination.

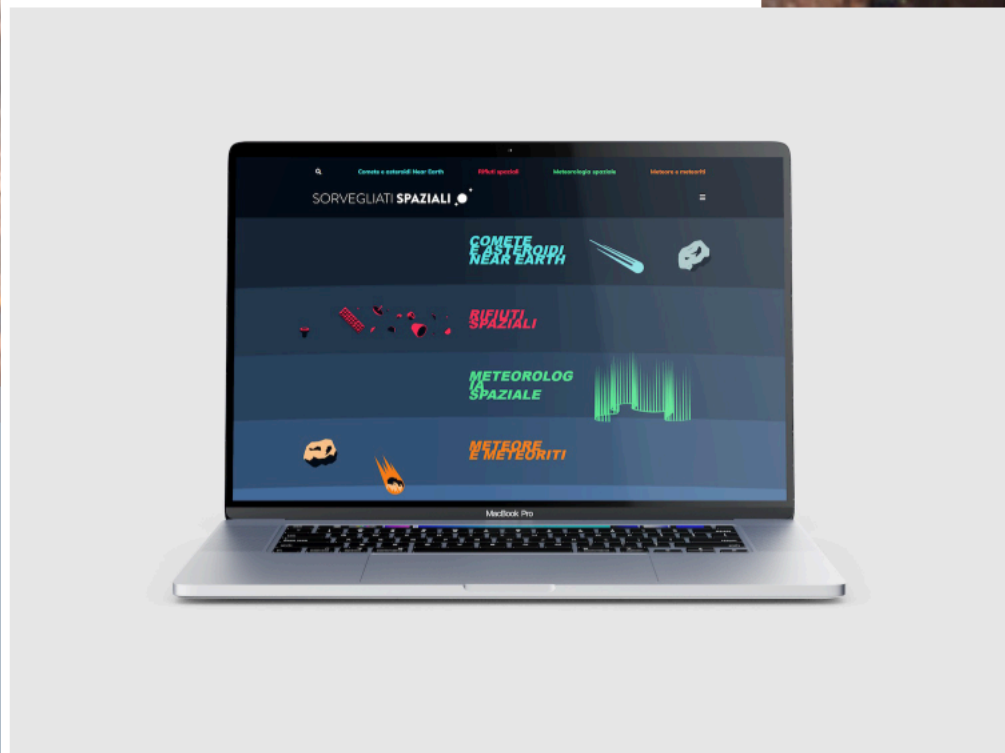

The core of the project is the Italian entirely graphic and multimedia website [sorvegliatispaziali.inaf.it](http://sorvegliatispaziali.inaf.it) available online since October 2021 (translation in English in progress), which intends to become a national point of reference for information and in-depth content on Planetary Defense, timely disseminating scientific and cultural knowledge through a variety of original state-of-the-art multimedia information products, meanwhile relaunching news from other national and international research bodies.

INAF original products, including the project website, are characterized by a strong and consistent visual identity and are: educational video-clips, interviews to scientists, geolocalized map with live satellites tracking, augmented reality and 3D computer graphic content, video-recorded theatrical pills, solar and Near Earth objects bulletins, infographics, a glossary.

It is moreover foreseen the organization of a multimedia public event on the occasion of the Asteroid Day 2022 including a round table, movie screenings and a meteorites exhibition.

The project is developed in collaboration with external research institutions, web design and professional theatrical companies and is endorsed by the Outreach Office of the NASA Planetary Defense Coordination Office.
