Key words: errata, addenda – accretion, accretion discs – magnetic fields – stars: neutron – stars: rotation – X-rays: binaries.

The paper ‘X-ray coherent pulsations during a sub-luminous accretion disc state of the transitional millisecond pulsar XSS J12270–4859’ was published in MNRAS, 449, L26 (2015).

The rightmost column in Table 1 reports an incorrect value of the uncertainty affecting the estimate of the frequency of the coherent signal observed by *XMM-Newton*, $\sigma_\nu = 3.5 \times 10^{-7}$ Hz. It should

read instead $\sigma_\nu = 2.2 \times 10^{-6}$ Hz, and the frequency is therefore $\nu = 592.987\,7712(22)$ Hz. The error arose from a clerical mistake, and has no impact on the results reported in the article. The reader is urged to consider the correct estimate of the uncertainty when comparing this value with other estimates of the spin frequency of the pulsar.
